

Guidelines for Creating the MS Power Point Presentation for the Genetic Disease Conference

Your Multimedia Presentation must contain the following:

1. At least 10 slides, but no more than 12 slides total.
2. The first slide should include your name, genetic disorder, class period, and date.
3. There should be one slide for each of the following aspects of your disease:
 - symptoms & incidence
 - tests and screening
 - treatments
 - cause & how it is inherited
 - additional facts or theories
 - expected quality of life for patient
 - where you can find more information on this disease
 - additional thoughts or questions you have
4. Within the body of the presentation, you should include at least two (2) graphics or images. Here is a good place to search for science images: [Image Gallery](#) at the Human Genome Project Information website.
5. The last slide should include the resources you used (for example, websites, at least one (1) print resource, etc.) following the citation examples given in class.
